Time taken	7 mins 8 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

int main()
{
    int n, c = 0;
    scanf("%d", &n);
    int i = n / 2;
    while (i < n)
    {
        c++;
        int j = 1;
        while (j < n)
        {
            c++;
            int k = 1;
            while (k < n)
            {
                c++;
                c++;
                k = k * 2;
            }
            c++;
            j = j * 2;
        }
        c++;
        i++;
    }
    c++;
    c++;
    printf("%d", c);
    return 0;
}
```

	Input	Expected	Got	
✔	4	30	30	✔
✔	10	212	212	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
